64 bit Oracle WebLogic Server. JDeveloper.zip A: I installed the ODM client from the link provided and it worked on my end, though I had to install it via command line on a server machine. I do have a PPC machine (4 core) and one on which I installed Windows, but I was not successful with Windows installer. If you are already on OSX and want to get started, you can find the PPC ODM client link here. My recommendation would be to check if the link above works for you. The Windows link is on the next page. List of Carnegie libraries in Texas The following is a list of Carnegie libraries in Texas. Currently, there are 23 Carnegie libraries in the state of Texas. While other buildings were planned but never built, several served as repositories of materials for additional Carnegie libraries. I've read that in order to draw the pie chart, I have to import QuartzCore.h. I imported QuartzCore.h into the project. I dragged Quartz.framework into the project. However, I got an error, saying that Objective-C/C++ compiler does not support ARC. I am trying to use the ARC. I'm not sure how to import QuartzCore.h, Quartz.framework and Auto Layout. Any help will be appreciated. A: You can not import QuartzCore.h in Xcode because that is an CoreGraphics Header, not Cocoa, Libraries you probably want to import are NSData, NSString, NSNumber, NSDate, NSArray and NSDictionary, these are all Cocoa objects. Put the Quartz.framework into a project of its own so you can then drag it into your project.
